Domes are available to buy in five sizes

3mtr x 3mtr 10-15 person capacity, the 3x3 unit can be used on its own as a single outlet, perfect for trade stands as an alternative to shell schemes at exhibitions. Used in conjunction with other sized domes, they can be linked together to form ancilliary rooms such as tunnels and lounge areas, ideal for cloakrooms or production space.

6mtr x 6mtr 40 - 60 person capacity, the first of the medium to large size units, the 6x6 offers more internal space and is big enough to be used on its own. There are eight archways on a 6x6 offering eight opportunities to attach further structures of any size. Thus making it possible to go around corners and extend the entire structure in any direction you wish, ideal as a striking central point for any event.

6mtr x 9mtr 60 - 80 person capacity, the 6x9 offers a larger internal space of 54 square metres providing further flexibility in size capacity and shape. Again, it is possible to attach any other size of structure to it. Ideal as a separate bar area when used in conjunction with other dome structures

9mtr x 9mtr 100-120 person capacity, the 9x9 is the kingpin for most operations including 100 people or more. The impressive large central dome rises to 4.5 metres without any central support. This structure gives rise to an endless array of design ideas with its size and height. Link this to any other size of dome structure and you have the beginnings of a venue unrivalled in its possibilities.
